

Interactive comment on “On the determination of the global cloud feedback from satellite measurements” by T. Masters

A. Dessler (Referee)

adessler@tamu.edu

Received and published: 30 March 2012

I wanted to add one last comment. I strongly recommend that the author adjusts all of the dCRF/dTs values in his paper to obtain cloud feedbacks. I'm afraid that there'll be confusion by those reading the paper and that readers will mistake the lower values of the dCRF/dTs statistic for the actual value of the cloud feedback. It will also make the discussion simpler to follow and make comparisons to Dessler 2010 more obvious.
