1. With respect to the figures being hard to interpret, if the pdf file is saved, and then opened using Adobe Acrobat, the feature that displays the figure on the full screen allows a much clearer view of the graphic of the model results.
2. Thank you for catching the mislabeling of the panel in the upper right of Figures 1a and 6a. They should indeed be '[GSRM]-[1xCO2]'.
3. The five suggestions for clarification in the wording all make good points, and will be addressed in the revision of the article at the end of the posting period.

Thank you for the very close reading of the article.
