I totally agree with the referee #1, this paper requires a significant effort before being accepted by an international journal. The presentation of the paper is really poor. There is no emphasis on what is the scientific challenge of this research and what are the innovative aspects of the research. I believe that the paper cannot be accepted as it is and it needs a complete restructuring with: the motivation and significance of the research, a clear description of the state of the art, and detailed description of methods and results in order to allow the replication of the study.
