I agree with the comments of the previous Referees. The paper is inaccurate and poorly written. It is required a major renovation and upgrade to give quality to the presented work before it is considered further. To improve the manuscript, the aim and importance of the research topic should be explained more clearly. The sections of the state of the art, methodology and results need to be rewritten and reorganized, conclusions should be explained with more details. Finally, the manuscript, before the re-submission, should also be reviewed by a native English speaker.
