

Interactive comment on “Polynomial cointegration tests of anthropogenic impact on global warming” by M. Beenstock et al.

M. Beenstock et al.

nathan.paldor@huji.ac.il

Received and published: 5 October 2012

We were very happy to read the referee’s accolades of our approach (e.g. “...important evidence regarding the AGW controversy..” and “...important contribution to the literature on AGW”) and his general remark in which he provided a broad perspective of both the AGW controversy and the implications of cointegration tests. The 36 detailed text comments that the referee lists will be incorporated in the revised version of the manuscript which will be completed upon acceptance of the paper for publication in ESD. We are very thankful to the referee (and a suitable acknowledgement will be added to the manuscript should it be accepted for publication in ESD) for taking the time and effort to review our manuscript so meticulously. The point-by-point response to the specific points raised by this referee are included in the supplement file.
