

***Interactive comment on “A GIS based study on bank erosion by the river Brahmaputra around Kaziranga National Park, Assam, India” by J. N. Sarma and S. Acharjee***

**Anonymous Referee #5**

Received and published: 23 October 2012

Based on a careful reading, it is my belief That the work must be deeply revised, both in form and in substance, before being published in an international journal. In particular, as regards the form, the paper must be carefully rewritten, according to the standard rule (grammar, style, spelling, etc.) of the scientific paper. Therefore, the paper should also be reviewed (before re-submission) by a native speaker of english. With regard to the scientific substance, it is necessary that: the aim of the research topic and their importance should be more clearly highlighted and explained; The sections "previous work" and "database and methodology" must be integrated and reorganized; The results and discussion Sections should be better organized and explained with more details; Finally, the Conclusions should be extended and integrated with more details

C554

of the paper.
