I agree with the referee #1 on the overall appreciation of the paper. The decision-making process developed by the authors is very interesting and paves the way for new lines of research development in the field of integrated assessments especially to support urban planning.. The integration of GIS and assessment methodologies (AHP) is an innovative procedure, able to drive to a sustainable land transformation. The assessment criteria and the indicators proposed have been rigorously selected, and I agree with minor revision, as recommended by referee #1.
