The paper is really interesting and it confirms the importance of a Dynamic Spatial Data Analysis to investigate and to assess the environmental impacts of spatial planning, especially in fragile territorial ambits like the coastline. The literary review of SEA is remarkable and it highlights technical and governance issues to be solved about the correct interpretation of an environmental evaluation process. I only suggest the review of some minor typing errors and the English editing of the following sentences:

Âú Page 1193, lines 7-15

Âú Page 1194, lines 5-13

C590

Moreover, it would be interesting a better representation of criticality and sensitivity maps, according to the Land Use Pressures.
