

***Interactive comment on “The support of multidimensional approaches in integrate monitoring for SEA: a case of study” by C. M. Torre and M. Selicato***

**Anonymous Referee #2**

Received and published: 5 November 2012

General considerations. The argument is quite interesting and covers several disciplines. It appears that the contributions by the different involved disciplines is well readable in the constructions of parameters of pressure that represents the most interesting piece of the paper. Specific suggestion. Even if the explanation is already sufficient, authors could extend the part of the paper related to the methodology implementation. There are some typing errors; a check spell is suggested.
