Received and published: 8 November 2012

On behalf of my co-authors, I want to thank Dr. Brierley for his thoughtful comments and constructive feedback on our manuscript. He raises several valid points, in particular relating to model sensitivity tests, and we are currently updating our analysis based on his comments. We look forward to addressing all of his comments/concerns more completely in a formal response letter and revised manuscript. Sincerely, Ryan Sriver (on behalf of Matthew Huber and Leon Chafik)
