Received and published: 8 November 2012

On behalf of my co-authors, we wish to thank the 2nd reviewer for his/her constructive comments and insightful feedback on our manuscript. Both referee 2 and C. Brierley raise some important points regarding experimental design, model sensitivity, and model performance, and we are assembling a new version of the manuscript and formal response to the reviewers, in which we will revise and address all comments. We thank both reviewers for spending the time to carefully review the ms and for the constructive feedback. Sincerely, Ryan Sriver (on behalf of Matthew Huber and Leon Chafik)
