Received and published: 8 October 2013

I really do not have much to say by way of guidance to the authors. The manuscript has received mostly positive comments, most of which relate to clarification, more detailed explanation of concepts and assumptions, and interpretation of the results. The paper is very interesting, and I would like the authors to substantially revise the manuscript along the lines of their responses so far to the reviewers, and resubmit a revised version as soon as possible. I do not see the need to send it back to the reviewers at this stage.
