Received and published: 8 August 2014

The manuscript provides usefull results and conclusions with regard to a very important and actuall scientific problem. The presented research study succesfully applied a complex system of state-of-the-art modelling tools. To improve further the quality of the manuscript I suggest to improve certain unclear texts and figures. In the attachment I am sending the manuscript with my comments and suggestions inserted. Also the English of the text needs some fine-tuning.

Please also note the supplement to this comment:
