I appreciate the approach of the author, but I wonder why no comparison (or even citation) is made to works by researchers in networks and global teleconnections? For example, Guez et al, EPL 2013; Ludescher et al, PNAS 2013, and others.

In my opinion, the suggested multivariate analysis should be developed at the same scale as in the mentioned references, and directly compared in the same case study.

Without such comparison, the paper lacks up-to-date field overview, in my opinion.
