For your information sir, my article does NOT contain an ENSO (El Niño - Southern Oscillation) model. The example given in the article is a stochastic model of the AMO - SST3.4 (Atlantic Multidecadal Oscillation - sea surface temperature in Niño area 3.4) bi-variate time series at the sampling rate of 1 year. This is by no means an ENSO model.

Therefore, your comments regarding articles on ENSO modeling and forecasting have nothing to do with my article.

Thank you for your interest.
