

Interactive comment on “On studying relations between time series in climatology” by V. Privalsky

Anonymous Referee #2

Received and published: 25 May 2015

My initial review suggested to compare modelling proposed by the author with modelling proposed by specialists in networks analysis, which would put the new paper into the context of the contemporary research, in my opinion.

For general readership of ESD, the paper on its own does not provide sufficient literature review on the topic.
