## ***Interactive comment on “Short Communication: Atmospheric moisture transport, the bridge between ocean evaporation and Arctic ice melting” by L. Gimeno et al.***

### **Anonymous Referee #1**

Received and published: 16 June 2015

This is a interesting paper which is suitable for ESD.

My vote are minor revisions.

1. I suggest to shorten and to rewrite the abstract. The first sentence is confusing.
2. Figure 1 is difficult to understand and too small. I suggest to separate it into 3 different Figures.
3. The trends in the 3 regions show a pronounced decadel-scale variability and the authors should reflect about that.
4. What is the origin of the enhanced evaporation over the 3 ocean regions?
