

Interactive comment on “Late quaternary temperature variability described as abrupt transitions on a $1/f$ noise background” by M. Rypdal and K. Rypdal

S. Lovejoy (Referee)

lovejoy@physics.mcgill.ca

Received and published: 4 December 2015

By their absence, the authors' text implicitly raises basic issues about intermittency and multifractality that discussed in the supplement attached below.

Science must progress by building on past achievements not by ignoring them.

Please also note the supplement to this comment:
