Received and published: 15 April 2016

We would like to thank the commentaries of the Editor and the three reviewers. We totally agree that the description of method must be clarified in order to illustrate the potential use of the technique. For this purpose, the section “data and methods” was re-written taking into consideration all questions arisen in order to provide a detailed description of the approach. We hope to answer all questions arisen by the reviewers. In particular, the commentaries arisen by the Reviewer 2 have been re-arranged focusing on the different themes.
