I also thank Referee #2 for a constructive report that will be very useful in the revision of the paper. I shall not reply to the specific comments in this preliminary response; I agree with most of them. More detailed response will be given later when I submit the revision. I just would like to point out that both referees seem to favour the development of a broader tutorial type article to with the Hansen et al 2017 article is treated as an example case study. Personally, I think this is a very appealing challenge. But it is somewhat at odds with the short communication style of the original manuscript. However, if the editor encourages a revision in this direction, I will be more than willing to do so.
