Received and published: 26 August 2018

In going through the citation list for this paper, I noticed that a paper that focused on linearity of climate response in the geoengineering context was not cited. I know that it is not the best form to ask people to consider your own papers, but in this case I think the suggestion may be warranted.

Several papers that Long Cao has led have discussed issues associated with the linearity of the climate response to solar geoengineering, but from a more empirical and less mathematical perspective than the work under consideration, and also not in the context of control theory. Nevertheless Bódai et al may want to consider the
