

Interactive comment on “Yardangs and Dunes: Minimum- and Maximum-Dissipation Aeolian Landforms” by Ralph D. Lorenz

Axel Kleidon

axel.kleidon@bgc-jena.mpg.de

Received and published: 5 December 2019

I noticed that this manuscript does not fulfil the criteria of an ESD Ideas manuscript, as it is much too long. ESD Ideas manuscripts need to be short (about 2 printed pages, 1 figure), as described on the web page (https://www.earth-system-dynamics.net/about/manuscript_types.html).

After consultation with Copernicus, we decided to switch the submission category of this manuscript to a regular research article. This means in the review process, it should also be treated as a regular submission, with the associated review criteria.

I apologize for not catching this before this submission entered the discussion.
