Methods section: Consider adding a table that summarizes geographical data variables including the rationale for using them in this analysis.

Figures: Figure 1b is redundant with vertical axis of Figure 2. I suggest removing panel b from Figure 1 and panels d-f from Figure A1 and combining panels 1a, 1c, A1a-c, and A1g-i into a revised Figure 1.

I suggest combining Figure 2 and Figure A2 into a four panel Figure 2. To improve clarity of Figure 2, replace country names with numbers in circles and add number/country identification in the legend. Regarding Figure 2 legend, add a, b, and R^2 for RCP8.5 linear trend.
