1) Line 26-27 -> the term "natural disasters" is now obsolete (see e.g. [1] <https://www.gndr.org/news/item/1499-disasters-are-not-natural.html> and/or [2] <https://www.undp.org/content/undp/en/home/ourperspective/ourperspectivearticles/2012/10/we-call-natural-disasters-are-not-natural-at-all-jo-scheuer/>). I suggest to rephrase the word to "natural hazards".

2) If you find it useful you can cite the following work where a global analysis of concurrent flood-drought events has been performed using the PDSI <https://doi.org/10.5194/esd-11-251-2020>
