Dear editor,

We have considered most of the suggestions by the reviewers. The most important are a re-organisation of the text and significant language edits.

Comments from reviewer 1:

We reorganized the text mainly according to the suggestion. We, however, did not add further concerning the drivers of extremes (in terms of mean temperature and mean sea level), those aspects are thoroughly described in other texts (Meier et al 2021; IPCC). We included only some impacts, having all impacts included would make a too extensive review. We explain this more clearly in the text.

We made an effort to harmonize the chapters following the suggested structure. There are some differences between the chapters still, one reason is that the processes, and knowledge are different in nature.

Some information about meteo-tsunamis is included

Reviwer 2:

(1) We included the language corrections and also had a professional language editor improving the text.
(2) Partly rewritten.
(3) The text is reorganized
(4) better explanation is included
(5) We did not change the date format
(6) Correct, removed
(7) Rephrased
(8) Included

Language edits from the attached fine included.

Suggestion of re-organisation, this is a very good idea, we partly follow the suggestion from the reviewer, we, however, do not add further concerning the drivers of extremes (in terms of mean temperature and mean sea level), those aspects are thoroughly described in other texts (Meier et al 2021; IPCC).
