

Authors response to editors minor corrections

Thank you for your comments and minor corrections for the manuscript. These will improve the paper and clarify several lines / figures

1. Figure caption for Fig. 3: please number the panels, e.g. a-d, and refer to them in your figure caption to which panels the description refers, i.e. the grey line (a-c) refers to the 1:1 line. Also, you need to explain the colours of the LAI time series where you compare them against the Copernicus data.

Done

2. Line 297: please remove "[]" at the beginning of the sentence.

Removed

3. Figure 8,9 is very small and its pattern hard to read. Consider increasing its size.

We have increased these in size

4. Line 455: do you mean "southern Amazon-Cerrado border"?

Yes, we have changes the sentence to your phrasing for clarity

5. Line 535: please revise this sentence or consider cutting in two: "While EO derived AGB maps do exist of different time periods (e.g. ESA CCI santoro et al., 2021) these estimates are typically created using different processing chains, calibration data, satellite etc. resulting in these estimates having different bias and error structures making them more challenging dataset to use at this time."

Yes, this sentence is a bit of a mouthful. We have divided this into two.
